MAK ST-250 inoculum cum aerator system for lake restoration

Our Lalbagh Lake # one receives drainage water from the city. Because of this lake was emanating very bad smell. This was a great nuisance for the park visitors and also the regular walkers prohibiting them going around that area.

We have come to know from D. Gangappa I.A.S (retired) Founder, chairman of Manu Neethi foundation that Manickam Athappa Kounder (MAK) Chairman of MAK India Limited (MIL) has the technology and expertise to deal with Lake Restoration. We approached MIL who is DRDO license holders to manufacture Bio Digester Septic Tanks and the inoculum. The basic concept of this DRDO technology is to NIP-IT-AT THE BUD concept.

MIL improved DRDO technology and developed MAK ST- 250 inoculum and using for lake restoration along with their aeration system. We requested them to view a demonstration at our Lake # one. They installed the system in the lake along with a simple garbage filtration system for the incoming water to keep the lake tidy.

The very bad smell vanished in less than two days.

We strongly suggest that this can be tried in various lakes like Bellandur which is a major issue for Bangalore city.
